

MALENA

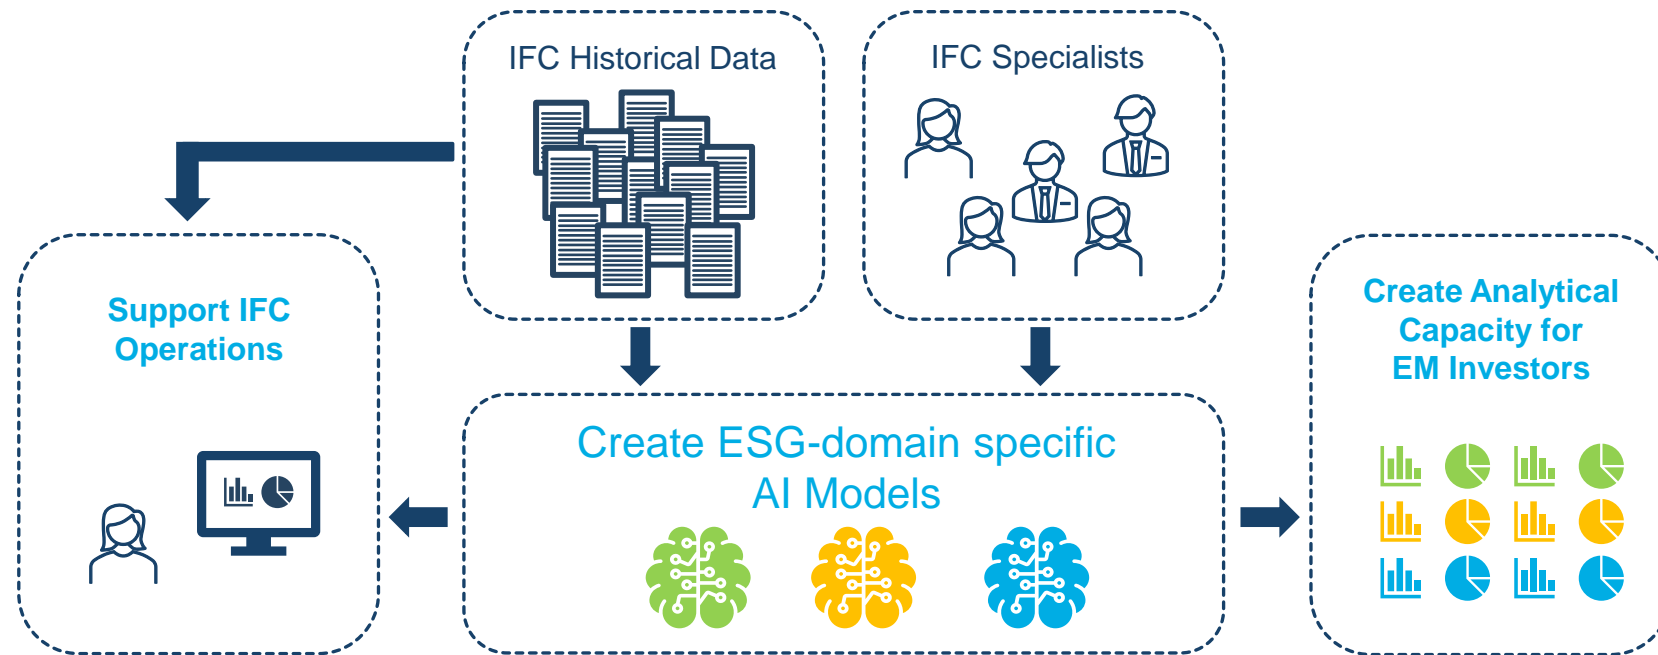

MACHINE LEARNING ESG ANALYST

IN PARTNERSHIP WITH

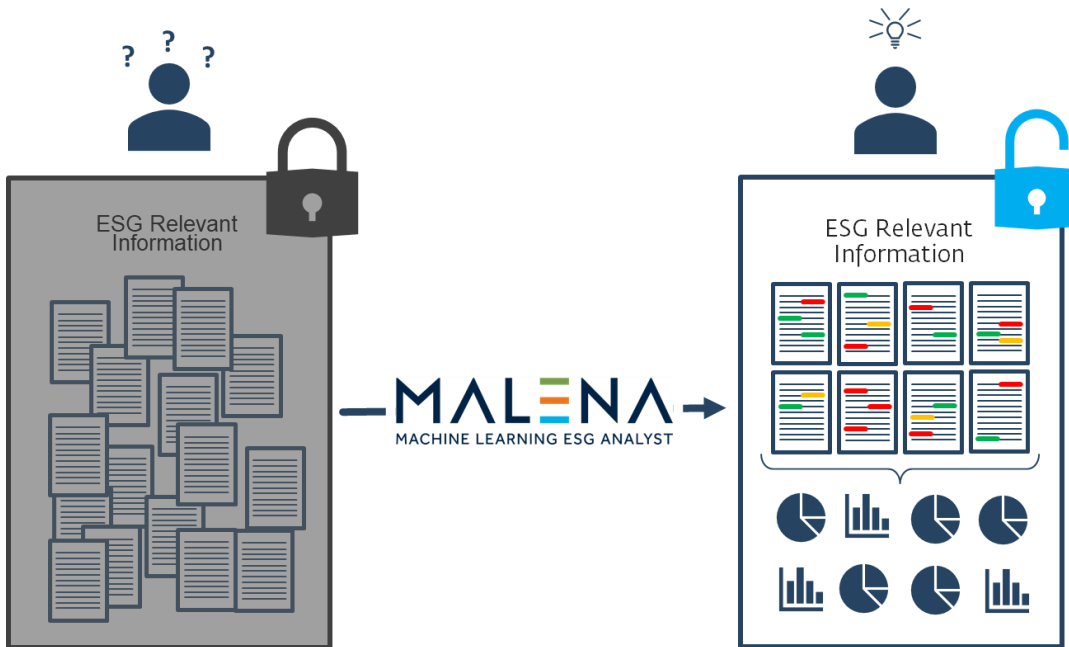

Leveraging Artificial Intelligence for Development

Goal: Develop innovative ESG solutions leveraging disruptive technologies to drive sustainable investment in emerging markets

MALENA: Natural Language Processing to unlock text

MALENA is an AI assistant to rapidly identify over 1,200 ESG risk terms and predict sentiments based on context

MALENA will predict a negative sentiment for risk terms that occur in an ESG risk or performance gap context

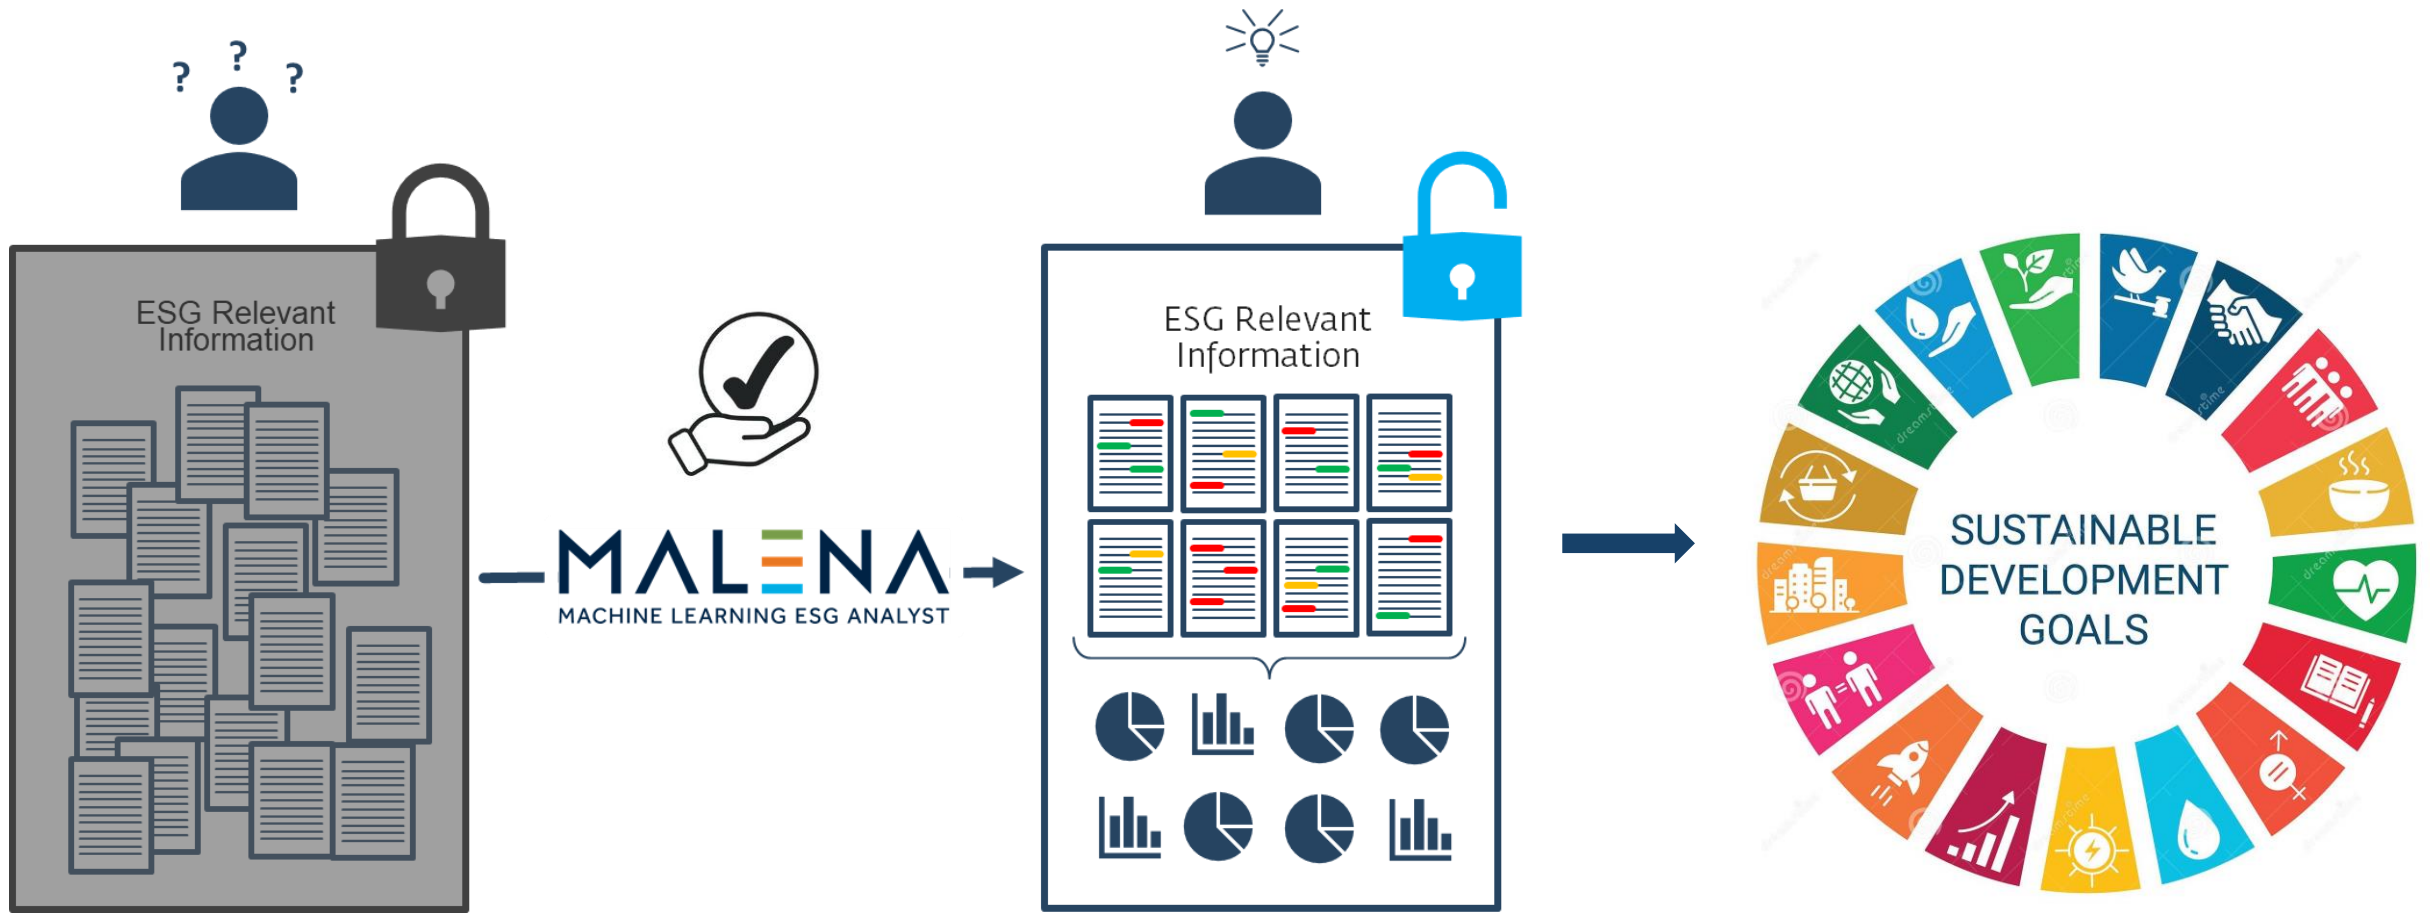

The main concerns amongst other issues raised included the effect of the project on the proposed location of the site which the appellants claimed was a residential estate, a rich marine environment and citing concerns that the terminal would endanger the lives of the **community**.

The ESIA identified the following key issues; (i) construction related impacts such as dust, **noise** and **fugitive emissions** emissions **emissions**; (ii) **wastewater** management; (iii) operational **hazards**; (iv) potential increase in traffic during construction and operation from trucks conveying LPG to rail heads and customers.

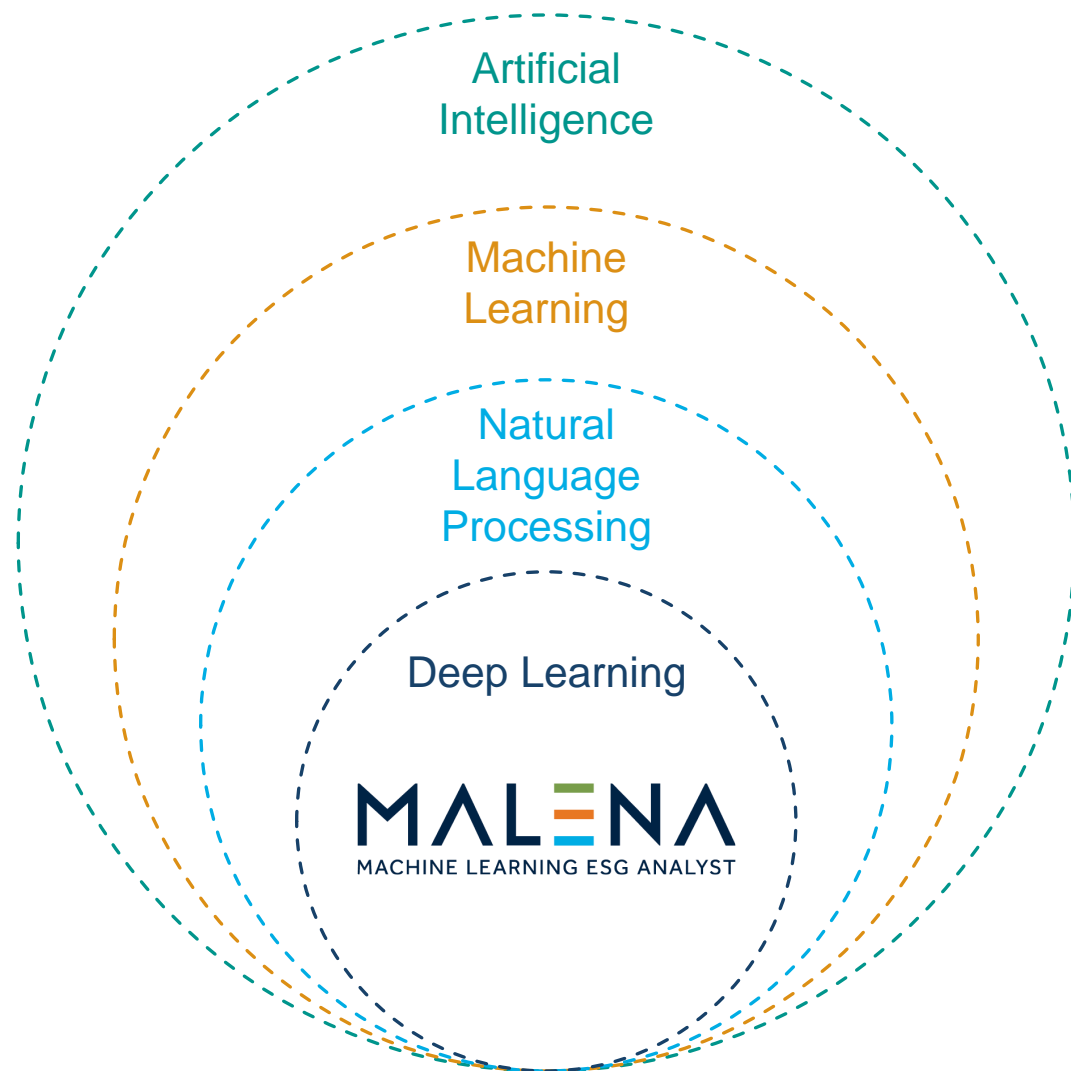

There are no “negative” words. MALENA makes predictions based on context, for example: “**no fatalities**” = positive sentiment

Based on information provided during appraisal, Robust did not incur over the last three years any material regulatory **penalties**, **fin**es or sanctions for contraventions or **non-compliance** compliance **compliance** with statutory obligations, as well as not reported any **fatalities** on sites at any of its operations. Supply Chain RiskRiskRisk Assessment & Management.

Trustworthy artificial intelligence to make investments

AI Overview

What is Deep Learning?

- Deep learning is comprised of artificial neural networks (ANNs). “Deep” in deep learning refers to a neural network comprised of more than three layers.

How to Train a Model

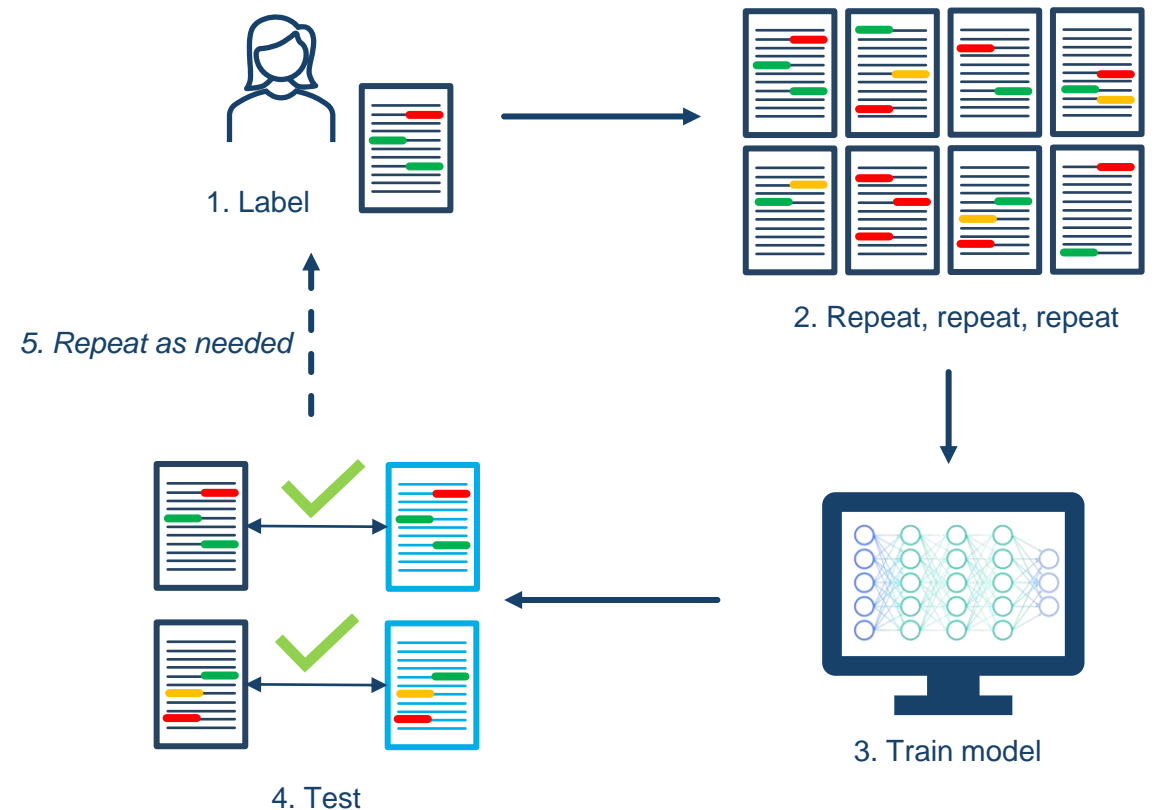

Supervised vs Unsupervised

- **Supervised learning** leverages labeled training data to “learn” the relationships between input data and the desired output. MALENA is a supervised machine learning algorithm, trained on over 125,000 labeled data points.
- **Unsupervised learning** involves a machine transforming data into useful information without the need to train the model on labeled data. Common methods include clustering and association. For MALENA we used an unsupervised algorithm called Word2Vec to expand our ESG taxonomy

MALENA

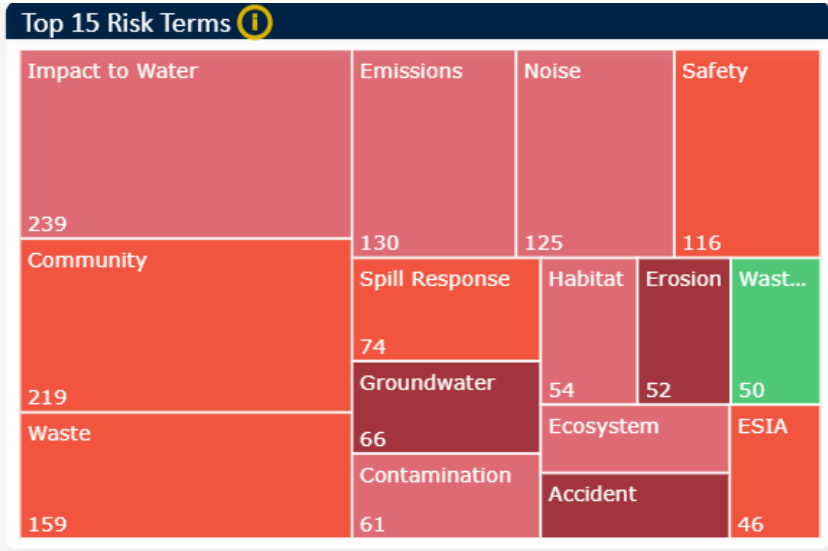

How to train a ... (supervised) model

- **High quality** training data in **large quantities** is a key success factor for supervised machine learning models

ESIA Analysis

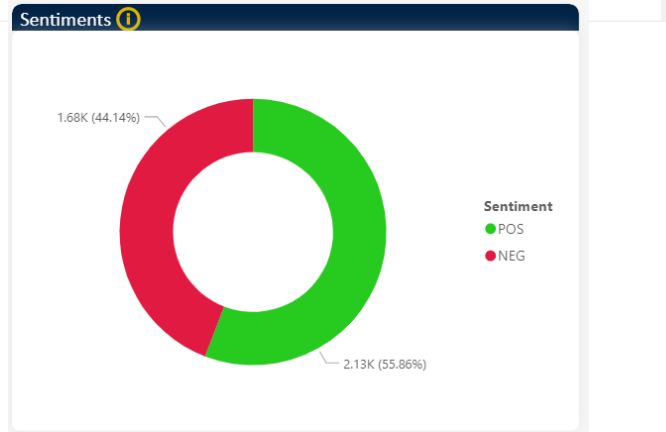

Analysis of an ESIA for a cement project in the Democratic Republic of Congo

Topics

Name	Pos(+)	Neg(-)	%Neg
Resource Efficiency & Pollution			
Impacts to Water Sources	148	246	62%
Pollution Risks	129	137	52%
Air Pollution	106	99	48%
Climate - Weather	48	99	67%
Waste Management	160	90	36%
GHG Emissions	37	29	44%
Resource Efficiency	19	15	44%
Water Pollution	31	15	33%

Labor & Working Conditions			
Worker Health and Safety	165	145	47%
Occupational Health	43	92	68%
Transparent Working Conditions	45	26	37%

This would have the advantage of a shorter haul distance, but would mean establishing a crossing in the flowing portion of the Yuku River, and associated impacts on riverine vegetation, impacts on agricultural lands, and dust impacts on water quality (see Figure 4-17), and impacts on Yuku village.

Environment
 Malaysia updated its Nationally Determined Contribution (NDC) in August 2021, stating its intention to unconditionally **reduce economy-wide carbon intensity (against gross domestic product (GDP)) of 45%** by 2030 compared to 2005 level.

FOCUSING ON SUSTAINABILITY
 The **floods** that occurred in December 2021 had a devastating impact on lives and **livelihoods**, but what may be of greater concern is the likelihood of its recurrence. Experts have warned that there will be an increase in the number of **climate** catastrophes as a result of **climate** change, and the growing number of **climate** disasters in recent years is proof positive of that. Indeed, the world was reminded of the urgency of the situation at the United Nations' **Climate Change** Conference (COP26), which was held in Glasgow in November 2021. At the end of the conference, almost 200 countries including Malaysia, signed a **climate** change pact which promises accelerated action to reduce **greenhouse gas (GHG) emissions**.

The Malaysian Government had stepped up its **climate** change commitments—to not only work towards becoming a **carbon neutral** nation by as early as 2050, but also intends to reduce its economy-wide carbon intensity (against GDP) of 45% in 2030 compared to 2005 level. This target is an increase of 10% from the previous submission to the United Nations Framework Convention on **Climate** Change (UNFCCC). We applaud the Government's ambitious target, and have pledged our support of this goal by announcing our own net zero **emission** target that is integral to TNB Sustainability Pathway 2050 (SP2050) - our roadmap which sets out our sustainability commitments and aspiration while simultaneously futureproofing our business.

Under the SP2050, TNB aspires to achieve net zero **emissions** by 2050, as well as to reduce 35% of our **emissions** intensity and 50% our coal generation capacity by 2035. We will no longer be investing in

12), which has received a record-high allocation of RM400 billion for its initiatives, Malaysia aims to increase its RE capacity to account for 31% of the nation's generating capacity by 2025, as well as provisions outlining the development of green, or low-carbon, mobility, including electric vehicle (EV) adoption in urban settings. At the same time, the Government has also committed itself to become a carbon neutral nation as early as 2050.

We are fully supportive of our government's efforts to put the country on a more sustainable footing, which is aligned with the long-term strategy that we have put in place for TNB. Our hope is that together, we will attain our aspiration, to be a leading provider of sustainable energy solutions while delivering on our purpose to make Malaysian lives better and brighter.

PERFORMANCE HIGHLIGHTS

TNB reported a total revenue of RM52.63 billion for 2021 representing a year-on-year (yoy) increase of 19.7% from RM43.98 billion a year ago. Electricity sales had increased 19.3% yoy to RM51.56 billion from RM43.20 billion for the same period in tandem with the resumption of economic activity in the country, which

In terms of the standards of our operational performance, TNB continued to maintain world-class network standards despite the challenging operating environment. Our power plants continued to operate efficiently and reliably, with the average domestic and international plant availability exceeding 80% while our Transmission System Minutes, a benchmark for the minutes of interruption caused by transmission per year, scored 0.09 minutes. Meanwhile, the System Average Interruption Duration Index (SAIDI) scored 45.25 minutes while our Customer Satisfaction Index came in at 87%. These metrics put us squarely among the best power producers in Southeast Asia, and on par with systems in developed countries.

As for TNB's workplace safety performance, we continued to improve on our safety record with our Loss Time Injury Frequency (LTIF) improving to 1.03 in 2021 from 1.29 in the previous year. While we have done our utmost to reduce work-related fatalities, we unfortunately recorded eight incidences during the year. The loss of these lives is regretted and we resolve to do more in the coming years to prevent injuries towards our goal of zero fatalities.

Operating Profit
RM8.08 billion
 up 9.8% from RM7.36 billion
 a year ago

PAT
 grew
6.9%
 yoy to **RM3.86 billion** from

MALENA Product Pipeline

API

- API access to ESG sentiment analysis model
- Can analyze large amounts of documents
- Output can be customized and plugged into in-house applications

Upload

- Allow users to create ESG sentiment analysis profiles for companies using MALENA
- Users can upload custom set of documents
- Access via web-portal

Add-in

- Word / PDF add-in
- Highlights ESG sentiments in the original document
- Document can be saved with the sentiment highlights
- Sentiment analytics in document pane

Beta testing

IFC is engaging with a diverse group of institutions to beta test MALENA:

Multilateral Investment Guarantee Agency

- IFC's sister organization integrating MALENA into internal ESG analysis
- Delivered via API access to seamlessly integrate MALENA into MIGA's ESG applications
- Visualizations and output tailored to MIGA's needs

European Export Credit Agency

- Design thinking sessions in process workshop to define use case
- Focus on ESG due diligence and portfolio monitoring

IFC

Version 1.0 released June 2022. In testing internally with IFC specialists for ESG due diligence, portfolio monitoring, and insights.

Top 5 global Asset Manager

- Iterative design thinking sessions to define asset manager use case
- [Joint research](#) on MALENA application to address the ESG information gap in emerging markets
- Beta testing by ESG analysts underway

Regional Development Bank

- Joint research and publication in pipeline using publicly available data user portfolio information
- Proof of concept to expand language capabilities
